Description	A small, headed metal fastener having a coaxial cylindrical or tapered hole which does not exceed 112% of the mean shank diameter in the end opposite a slightly rounded head. The head is approximately 50% wider than the diameter of the rivet body.
Applications/ Advantages	Easier to clinch than solid rivets. The hole reduces riveting forces for riveting tooling while the remaining clinched solid shank can provide comparable shear strengths to other common riveting products. The oval head style is popular because of its low profile head and neat, finished appearance. The fastener is installed with a riveting hammer.
Material	Steel: Low carbon steel (containing 0.1% carbon or less) Aluminum: Grades 5056, 1100, 2017, 2117 or 6053
